

-This is the team name that the user inputs.

-This is the api that we used. This api includes the data for each team such as their record over the past two years

# NBA PLAYOFF PREDICTOR

-This is our code. Our code is built to take in an input statement (A Team Name) and then go to the api and check the data from the previous two years. Based off the data compiled it lets the user know if their team will or will not make the playoffs next year.
